

## Prompt Craft

The Department of Computer Science and Engineering organized a very innovative and skill-enhancing event, “Prompt Craft”, by the student association **ENIGMA** on 23rd November 2025. It dealt with the exploration of the various capabilities of Artificial Intelligence in generating designs. The participants were presented with a reference design and were required to replicate it without the use of any sort of manual editing or external modification; only AI-generated outputs through prompts were allowed.

The event gathered highly enthusiastic students who could demonstrate their skills in prompt engineering, creativity, and understanding of AI tools. The session was self-organized by the members of ENIGMA and provided an interactive platform for the students to experiment with AI-driven design generation and further refine their ability to translate visual details into effective prompts. The event brought forth the increasing importance of prompt engineering in modern computational design and urged students to adopt critical and innovative thinking.
